**Data. Decisions. *Results.***

# The GTP-Driven Natural Language Platform

Discover actionable insights in
the most intuitive way possible

# Why Quaeris?

When you can access insights like never before, you'll understand your business like never before.

## Ask questions of your data and get actionable insights instantly

**Quaeris** is AI-driven data search and BI platform that delivers personalized insights through an intuitive experience. Our proprietary AI-engine empowers business users to ask questions, receive answers, and share results – all within seconds.
### Ask questions, naturally, like Google for your corporate data

With written and voice support, obtaining insights is as easy as using Google. No pre-build, curated or managed dashboards needed.

### Receive personalized, contextual and recommended answers

Quaeris learns from your interactions to deliver personalized and recommended results based on your interests, role, and history.

### Pin meaningful insights, like Pinterest

Quaeris provides near real-time results on any data and allows you to pin insights that matter to you. Build your personalized pinboard in minutes.

### Embrace LinkedIn-like collaboration

Share insights and collaborate one-on-one or with the whole team in real-time. When everyone collaborates, driven decision making trumps opinions.
# Anytime, Anywhere

Engage in a natural conversation with data in your existing data-warehouse or CRM or ERP.

## Intuitive Search

Go ahead, ask the tough questions. Our intuitive platform will guide your insight discovery.

### Natural Language Search

Simply type questions in plain English, there's no need to use keywords or write queries. Behind the scenes, our advanced AI transforms your inquiry into database-ready language in milliseconds.

### Autocomplete

Instantaneous suggestions are provided as you type to speed up your search process.

### Voice-to-Text

Not only can you write questions in plain English, you can use your voice to search for insights as well.

# Hyper-Personalized Results

Receive real-time results and recommendations that inspire you to uncover novel insights.

## Intelligent Results

Like life, data is nothing without context. Our cognitive AI-engine interprets your search, interests, role, and history before providing ranked results to enable further exploration.

## Intuitive Answers

Your answer will be displayed automatically in the most relevant format, text, or a graphic visualization, based on the question asked. You can easily switch visualization types and filter views to suit your needs.

## Exploratory Drill Down

Select any search result, at any time, to drill down further and explore relevant results.

## User Feedback Loop

Provide thumbs up/down feedback to enhance future insights and refine our machine-learning algorithms.

## Query Inspector

Uncover the SQL query that was utilized to generate your results.

# Pins, Pinboards & Storyboards

Don't lose track of insights – pin them for future reference as pinboards or easily create curated Storyboards for sharing.
## Dynamic Pins

All it takes is one-click to monitor results for daily review or save intriguing insights. Best of all, pins update automatically to display real-time results.

## Pinboards

Enter the era of hyper-personalized insights, so long rigid, pre-built dashboards. You have the power to curate real-time, dynamic pinboards to monitor your most vital pins.
## Storyboards

Publish your big idea to your board, to your team or your peers. All inside of Quaeris in a secure, auditable, and controlled manner or as PDFs.

# Conversational Threads

Individual exploration is powerful, but collaboration across organization is transformative.

## Collaborative Chat Interface

Familiar and easy to use chat UI encourages in-depth data-driven conversations that lead to informed decisions.

## Fast, Protected Sharing

One-click process that allows you to select individuals and add a personalized message. To prevent security concerns, only individuals with access to the relevant data source will be eligible for sharing.

## Notifications, on mobile or browser

Enable notifications to ensure you never miss an important insight. You can manually review all the insights you've shared with others as well as the insights they've shared with you.

# Quaeris Proprietary Cognitive AI Engine

AI that's more human than machine.

## Natural Language Understanding (NLU)

Put an end to learning keywords or SQL queries. Behind the scenes, our advanced AI transforms your natural English question into database-ready language in milliseconds.

## Intelligent personalization

Our AI-engine interprets your search and returns stack-ranked results based on you interests, role, and history to help you make most of your time, and improves ranking accuracy as it learns more.

## Dynamic configurations

Our cognitive AI replaces archaic rule-based architecture making the cold start problem a thing of the past.
## Automatic Visualization

Answers are automatically displayed in the most relevant format, text or a graphic visualization, based on the question asked.
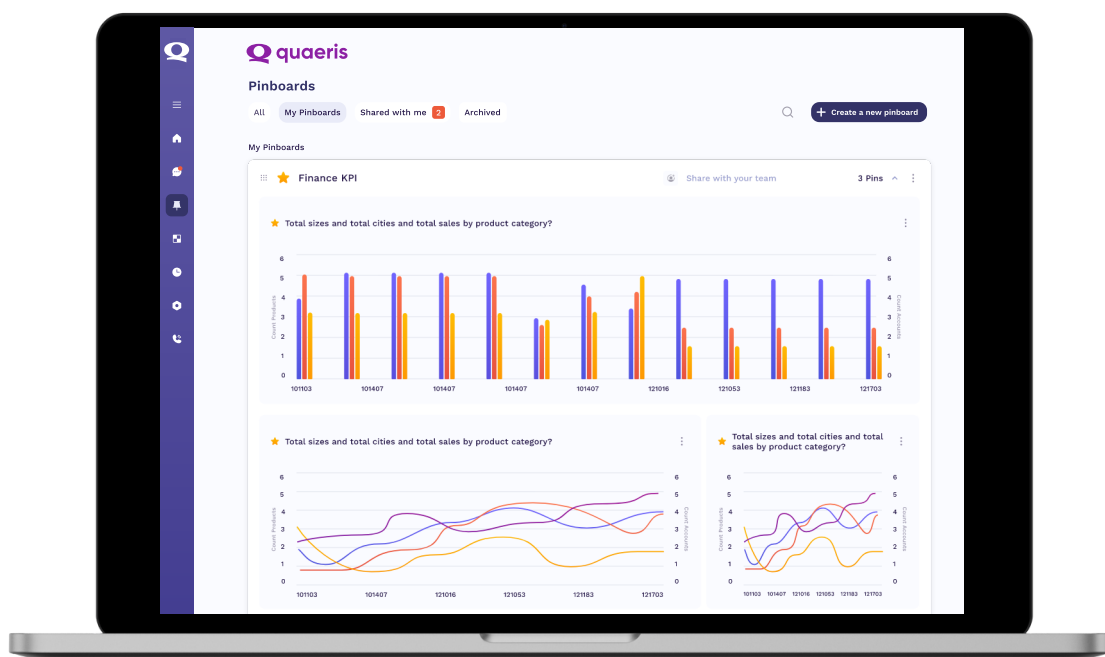

# Robust Security for Your Data
## Platform Security

**Best-in-class security protocols to ensure your data remains secure.**

- Support integrations with your identity providers
- Role based access to your information
- Full governance and compliance with audit trails
- Enterprise SSO solutions

# Scalable Architecture

## Platform Architecture

### Quaeris is built to compliment your data stack.

- Fully containerized system on Kubernetes
- Connect Quaeris to any structured data
- Support web and mobile platforms
- Micro-services architecture
- No need for data movement
